

Name: A. Sharma Roll: 17 Class: 10-B

Q5. Plant diagram for photosynthesis.

Sunlight -> leaf. CO₂ enters, water from roots.

Oxygen is released. Process occurs in chloroplast.

Labels: sunlight, carbon dioxide, oxygen, water.

Q2. The process mainly occurs in the chloroplast of the plant cell. Green plants make food using sunlight, carbon dioxide and water. Chlorophyll traps light.

Glucose is formed and oxygen is released.

$6\text{CO}_2 + 6\text{H}_2\text{O} \rightarrow \text{C}_6\text{H}_{12}\text{O}_6 + 6\text{O}_2$ (continued)

Name: A. Sharma Roll: 17 Class: 10-B

Q2 continued: Light reaction happens in thylakoids.

Dark reaction / Calvin cycle happens in stroma.

This is how autotrophs prepare their own food.

Q1. Arteries carry blood away from the heart.

They have thick elastic walls.

Name: A. Sharma Roll: 17 Class: 10-B

*Ans 7(a): Transpiration is loss of water vapour
from aerial parts, mainly through stomata.*

*Q6. Aerobic uses oxygen, more energy.
Anaerobic: no oxygen, lactic acid / alcohol.*

*Yesterday our school cricket team won the
match by 4 wickets. Virat scored 62 runs.*

Name: A. Sharma Roll: 17 Class: 10-B

*7b) temperature and wind maybe humidity
also I think (writing is hurried)*

*Q3. Stomata are tiny pores on the leaf.
They allow CO₂ / O₂ exchange and transpiration.*

*Q8. Small intestine has pancreatic enzymes,
bile from liver, and villi to absorb food.*
